

## Smart Tips

to Protect Your

# Mobile Device

### Keep It Locked

Add a screen lock to each of your mobile devices. This protects your device in case it's lost or stolen.

### Enable Remote Wiping

Remote wiping acts like a digital eraser when a device is lost or stolen. If your information no longer exists, no one can access it.

### Update the Operating System

Set auto-updates to keep your device operating system and any mobile apps current.

### Use Apps Safely

Before installing any apps, do a safety check: Are the reviews positive? Are there many downloads? What permissions does the app require for installation? Is the app regularly updated?

### Report It

If you lose or have any work-related mobile devices stolen, report it immediately.
